# How would you prioritize these statements given 100 total points?

# Any questions for the presenters?

The future of our natural resources depends on the actions elected officials take to protect them

What should be the number one priority item today in light of projected changes

How can we better coordinate access of resources to our municipalities? We often know that we need to do something, but lack the knowledge/info to act (& justify those actions to our constituents).

What has the general response been from elected officials in regard to climate change and resiliency?

Is there concern that the St. Bernard Parish decision will incentivize governments to take no action against potential impacts of climate change? Does being proactive potentially increase the government's liability?

For the group: Do municipalities feel there is sufficient local/regional expertise to incorporate climate change and sea level rise into comp plans and policy?

Are all the slides avail on line?
